How Is Your Eyesight?

Do not turn a deaf ear to this, but see and understand for yourself, for the sight may be preserved to the greattet age by using properly fitted glasses, whereas thousands of good eyes are ruined by the use of improperly fitted spectacles.

For Every One to Know

There is as much science in fitting glasses as there is in prescribing medicine. You do not go to a blacksmith for a set of false teeth; then why not have your eyes attended to by someons who has made a study of the eye and its defects?

In getting glasses, it is not a question of how cheap, but how good.

One pair of spectacles that fit are worth twenty pairs that don't, You cannot prescribe spectacles by rule, as every case has its peculiarities

Eye strain has caused more headache than all other causes combined. If in all cases of frontal headache, the physician would first send his patient to an optician before trying other remedies, he would save many persons years of suffering.

No part of the system will stand any more hard work than a healthy eye that is perfect in all its meridians. Is it not better, when your eyes trouble and bother you in your work, to have them seen to at once, than to run the risk of your complaint settling into some disease that will cost you lasting injury?

Under no circumstances should persons having children suffering from Strabismus (cross-eyed) consent to have an operation performed on them only as a last resort, for in nine cases out of ten the Strabismus is caused by a defective nence with, and a proper adjustment of glasses to correct it will not only remove the cause but cure the

If an eye has been injured by an acid, wash it out at once with a weak alkaline solution. If the injury be caused by an aikall, such as lime, use a weak acid solution, as vinegar and water, and follow by using a few drops of pure vegetable oil, and exclude the air.
